Dialectical Behavior Therapy (DBT) is a psychotherapy which balances therapeutic validation and acceptance of the person along with cognitive and behavior change strategies. It was originally developed by Linehan as an outpatient treatment for people 4 diagnosed with borderline personality disorder (BPD). In Linehan's original controlled trial DBT was shown to be effective in reducing self-injurious behavior and inpatient psychiatric days in women diagnosed with BPD. More recently the use of DBT has been expanded to populations with additional diagnoses and in additional settings.
