Plasma and Thermal Processes for Materials Modification, Synthesis, and Processing

Table of Contents

<i>Preface</i>	<i>iii</i>
(Invited) Nanostructures Growth by Oxidation of Metallic Alloy Thin Films with Atmospheric Pressure Remote Plasma <i>A. Imam, T. Gries, K. Hussein, M. Amati, T. Belmonte</i>	1
(Invited) Deep Silicon Etching - Increasingly Relevant >20 Years on! <i>D. Thomas, M. Muggeridge, J. Hopkins, N. Launay, H. Ashraf, T. Barrass</i>	9
Environmental-Friendly Fluorine Mixture for CVD Cleaning Processes to Replace C ₂ F ₆ , CF ₄ and NF ₃ <i>R. Wieland, M. Pittroff, J. Boudaden, S. Altmannshofer, C. Kutter</i>	23
Perfect Separation of Hybrid Orientation Structure of CeO ₂ (100) and (110) Regions Grown on Silicon on Insulator Substrates with Lithographically Formed Trenches <i>T. Inoue, S. Shida</i>	35
Author Index	47

Plasma Processes offers a wide range of manufacturing and coating processes, each with unique characteristics that make it attractive for specific applications. Our core competencies include a complete family of thermal spray processes, and EL-Form® electrodeposition for coatings and net-shape manufacturing; Powder Alloying and Spheroidization for the production and toll processing of spherical and alloyed powders; and a complete metallurgical laboratory for material analysis and characterization. Vacuum Plasma Spray (also referred to as Low-Pressure Plasma Spray) combines all the advantages of plasma spray within an inert environment to produce very dense coatings with the lowest oxide content. Vacuum Plasma Spray is cost effective for the spray of Thermal plasma and non-thermal plasma. Composition, thermodynamic and transport. properties of thermal plasmas. Modeling of thermal plasma flows, arc modeling. Generation of thermal plasmas. Basic principles of arc plasma torches. Factors influencing properties of plasma jet in arc. plasma torches (design of the torch, properties of plasma gas). Plasma jet fluctuations. Diagnostics of thermal plasma jets. Thermal plasma processing. Electron temperatures and densities in plasmas. Thermal plasma processing. Plasma technologies and decisive mechanisms. Heat transfer. Plasma melting. Plasma cutting. Metallurgy, welding, cutting. Surface modifications, coatings. Materials synthesis. Decomposition, waste treatment.
