Evolution fact or fiction? Charles Darwin. The theory of evolution which was formed by Charles Darwin, is as much theory as the theory of gravity or any other theory. Unlike physics theories, biological theories, and especially evolution have been argued since they were introduced into society. Charles Darwin's Theory. Evolution: species come and go through time, while they exist they change. Common descent: organisms are descended from one, or several common ancestors and have diversified from this original stock. Species multiply: the diversification of life involves populations of organisms. Students discuss which statements are fact, fiction, or opinion. Lesson is used as a starting activity for a unit on evolution. Statements can be printed and cut into slips and students work in small groups to categorize each statement as either Fact, Fiction, or Opinion. The included answer key has quick explanations as well as links to authoritative sources to explain the positions, sources from Berkeley's Understanding Evolution and New Scientist. Evolution misconceptions are fairly common for beginning biology students. For example, many think that evolution leads to greater complexity, or that natural selection is the only process that results in evolution. What your students know depends greatly on how much was co-evolution, fact or fiction? Evolution is proven . . . PROVEN! Therefore it's fact, and to say you don't believe in it is like not believing in gravity or particles or anything! And the fact that the 'all-knowing' God or these prophets never thought to mention it in the Bible, doesn't that just prove that religion is bogus? I mean believe in evolution or not- it's fact, whether that abides by your religion or not. The very fact the human race has progressed through time- in terms of technology, physicality etc. is just proof that we are evolving intellectually as well. Evolution Fact or Fiction? Robin (@batman) 8 years, 1 month ago. People who deny evolution are either profiting, ignorant, or as children had their minds manipulated and are unable to remold them with the facts science today provides us with. Religion was needed! no doubt. When we had little or no understanding of the world around us. it explained all the the unexplained at the time. That's been its job. Religion is a product of our evolution. Our evolutionary survival adaptations are such that we (well not me, I'm a mutant) are prone to develop beliefs. It fits comfortably into our mental framework (again, not me). Or so I'm coming to understand. This vid is a bit dry, but very interesting if you have an hour to spare. <http://topdocumentaryfilms.com/why-we-believe-in-gods-andy-thomson-lecture/>. 1.
