Description:

From Publishers Weekly Needham, the foremost Western historian of Chinese science, has written 15 volumes of his projected 25-volume Science and Civilisation in China series initiated in 1954. This immense, authoritative work has long needed distillation for the general reader, and British writer Temple impressively accomplishes the task here. Beautifully illustrated, the book describes some 5000 years of Chinese science, discovery and invention from agriculture, astronomy and engineering through industrial technology, medicine, math and music, up to, in an ironic closing chapter, the Chinese genius in warfare, including ancient Chinese usage of mustard gas, gunpowder and rockets. The book is an exhilarating celebration of historic achievements, the breadth of which will astonish the general reader. BOMC alternate; Macmillan Book Club selection.

China has been the source of many innovations, scientific discoveries and inventions. This includes the Four Great Inventions: papermaking, the compass, gunpowder, and printing (both woodblock and movable type). The list below contains these and other inventions in China attested by archaeological or historical evidence. The historical region now known as China experienced a history involving mechanics, hydraulics and mathematics applied to horology, metallurgy, astronomy, agriculture, engineering Undisputed masters of invention and discovery for 3,000 years, the ancient Chinese were the first to discover the solar wind and the circulation of the blood and even isolate sex hormones. From the suspension bridge and the seismograph to deep drilling for natural gas, the iron plough, and the parachute, ancient China's contributions in the fields of engineering, medicine, technology, mathematics, science, transportation, warfare, and music helped inspire the European agricultural and industrial revolutions. He is a VIP in China where the Chinese government has made The Genius of China an obligatory study text for tens of millions of Chinese students.
