

Liverpool John Moores University

Title: HUMAN COMPUTER INTERACTION
Status: Definitive
Code: **7009COMP** (103268)
Version Start Date: 01-08-2011

Owning School/Faculty: Computing and Mathematical Sciences
Teaching School/Faculty: Computing and Mathematical Sciences

Team	Leader
David England	Y

Academic Level: FHEQ7
Credit Value: 15.00
Total Delivered Hours: 24.00
Total Learning Hours: 150
Private Study: 126

Delivery Options

Course typically offered: Semester 2

Component	Contact Hours
Lecture	12.000
Practical	12.000

Grading Basis: 40 %

Assessment Details

Category	Short Description	Description	Weighting (%)	Exam Duration
Report	AS1	Group Coursework - a student-led case study involving analysis, design, prototyping and evaluation of a sample interactive software application	100.0	

Aims

To develop an understanding of Human Computer Interaction as a multi-disciplinary subject, with a special focus on interactivity and usability in computer systems and software development.

To develop a user-centred approach to computer systems design.

To develop an in-depth understanding of usability and evaluation, and their impact on software development.

To introduce students to the latest research in HCI, and its application to new technologies.

Learning Outcomes

After completing the module the student should be able to:

- 1 Explain in depth the nature of HCI and the support from its constituent disciplines
- 2 Critically relate human physical and cognitive abilities to system design
- 3 Apply interactive development methods to a significant case study
- 4 Demonstrate a systematic and critical approach to the design, development and evaluation of interactive systems

Learning Outcomes of Assessments

The assessment item list is assessed via the learning outcomes listed:

Case study	1	2	3	4
------------	---	---	---	---

Outline Syllabus

What is HCI?

The Human Performance Model of HCI

Usability Principles and Patterns

Task Analysis

Dialogue models

Software Development Methods and tools for HCI

Evaluation methods.

Accessibility and Special Needs in Interaction

Advances in Interaction Research

Learning Activities

Self-directed study and use of appropriate tool(s). Research into HCI and interrelated disciplines.

Notes

Human Computer Interaction is the key to successful interactive systems development. It involves the bringing together of understandings of human abilities, and technical understanding of hardware and software technologies. This module aims to bring these different strands together to give the student a set of tools for the building of better interfaces. The group coursework is assessed by peer assessment.

Human-computer interaction (HCI) is a multidisciplinary field of study focusing on the design of computer technology and, in particular, the interaction between humans (the users) and computers. While initially concerned with computers, HCI has since expanded to cover almost all forms of information technology design. Human-computer interaction (commonly referred to as HCI) researches the design and use of computer technology, focused on the interfaces between people (users) and computers. Researchers in the field of HCI both observe the ways in which humans interact with computers and design technologies that let humans interact with computers in novel ways. Human-computer interaction (commonly referred to as HCI) researches the design and use of computer technology, focused on the interfaces between people (users) and computers. Researchers in the field of HCI both observe the ways in which humans interact with computers and design technologies that let humans interact with computers in novel ways. Human-computer interaction (HCI) studies the design and use of computer technology, focused on the interfaces between people (users) and computers. Researchers in the field of HCI observe the ways in which humans interact with computers and design technologies that let humans interact with computers in novel ways. As a field of research, human-computer interaction is situated at the intersection of computer science, behavioural sciences, design, media studies, and several other fields of study. The
